1. Introduction

1.1 Purpose of this document

The purpose of this document is to provide a detailed project description of the application called Enterprise HR Management Portal, which is designed to be a platform for any organization to manage their Human Capital. More specifically, it is designed to help companies on/off board employees manage their training compliance. The document covers the design, test and deployment plan of the project. This document guides devOps for further maintenance and improvement of the project.

1.2 Intended Audience

This document shall be used in all phases of the project as a guideline. Intended audiences of this project are all project stakeholders:

- project supervisor
- project leader
- team members
- tester

Keyword	Definitions
Enterprise Hr Management Portal	The name of the project
Project Supervisor	A person in charge of supervising the project
Project Leader	A person in charge of organizing the team and communicating with the project supervisor
Team Member	An active member of the team responsible for making the job done
Tester	An active member of the team responsible for testing the application
Milestone	A time in a project that marks the end of a project phase or the completion of an important deliverable.
Git	Version control system that will be used in this project
Scrum	An iterative and incremental agile software development method for managing software projects and product or application development
Scrum sprint	The basic unit of development in Scrum
Scrum master	Ensures the smooth working of the Scrum team and enforces Scrum practices

1.3 Scope

This document defines the project plan of the Enterprise HR Management

Portal application. The overview includes objectives of the project, organization of the project team, development process that is going to be used during the project, assessment of possible risks, communication used between project stakeholders and project plan that includes time schedule and activity plan.

1.4 Definitions and acronyms

Product owner	Responsible for product management and its quality
---------------	--

1.4.1 Acronyms and abbreviations

Acronym or abbreviation	Definitions
HRM	Human Resources Management
SSO	Single sign on

2. Objectives and Requirements

A company or organization's HR department is usually responsible for creating, putting into effect and overseeing policies governing workers and the relationship of the organization with its employees. HRM is a wide area and key department in an organization that governs the quality and delivery of an organization. The objective of this project is to facilitate HR to govern resources between departments, promote, terminate, recruit and assign training to employees as per Manager's request. The key feature of this application is light-weight and integrated with third-party open source Moodle, which allows HR to create new courses as per organization's need, and assign training to employees periodically. HR can move employees within their organization to different departments. HR can assign different learning specific role also for different training. The roles and titles of the employees in all departments are maintained in the same way.

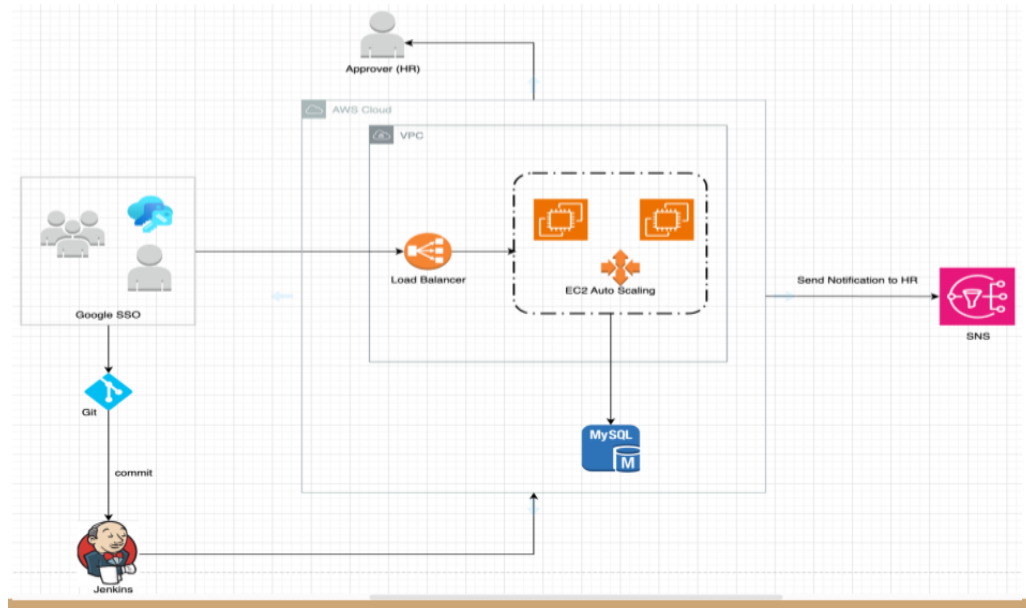

Our requirements for this project are to demonstrate:

- Single Sign On via HTTPS
- Employee Management
- Role Based Authentication
- Role Based Functionality
- Open source integration via Moodle
- Build a distributed system which communicates via REST APIs

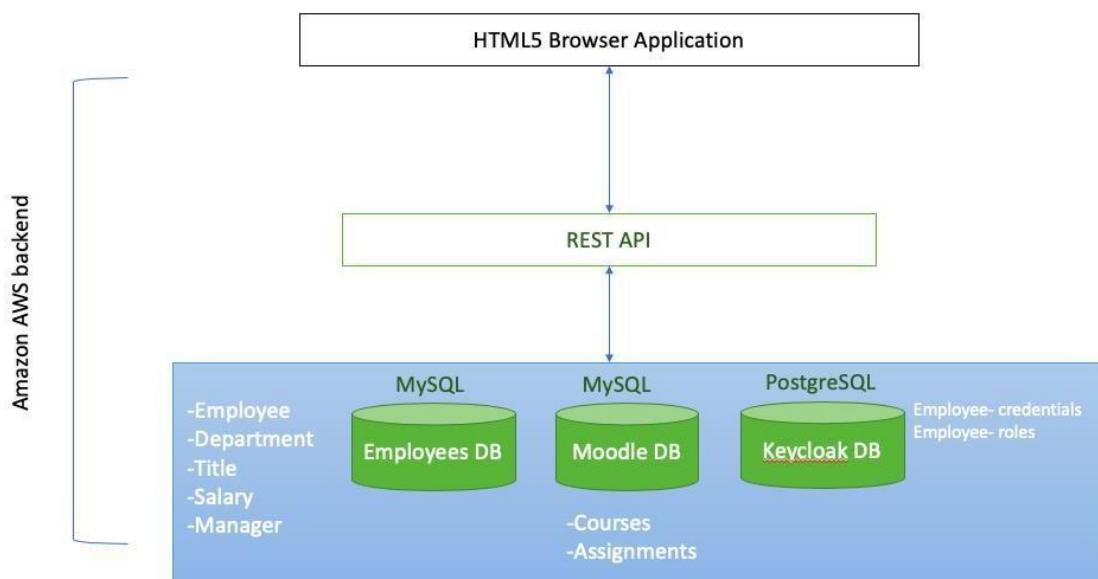

3. Architecture & High Level Design

I. Container Level Design

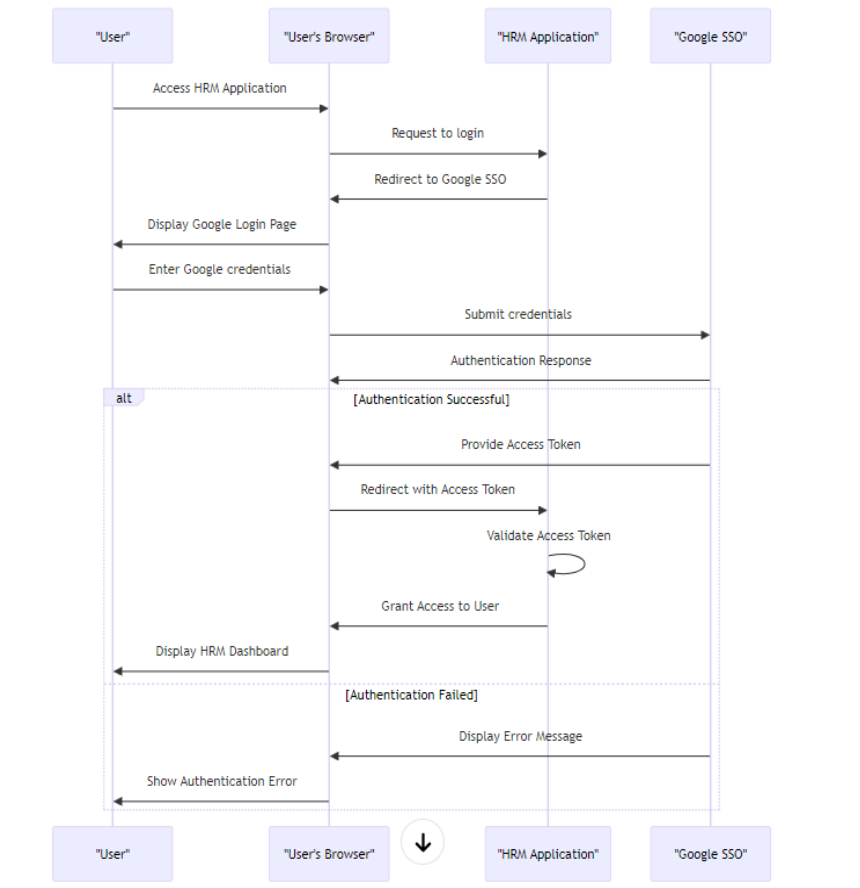

Architecture

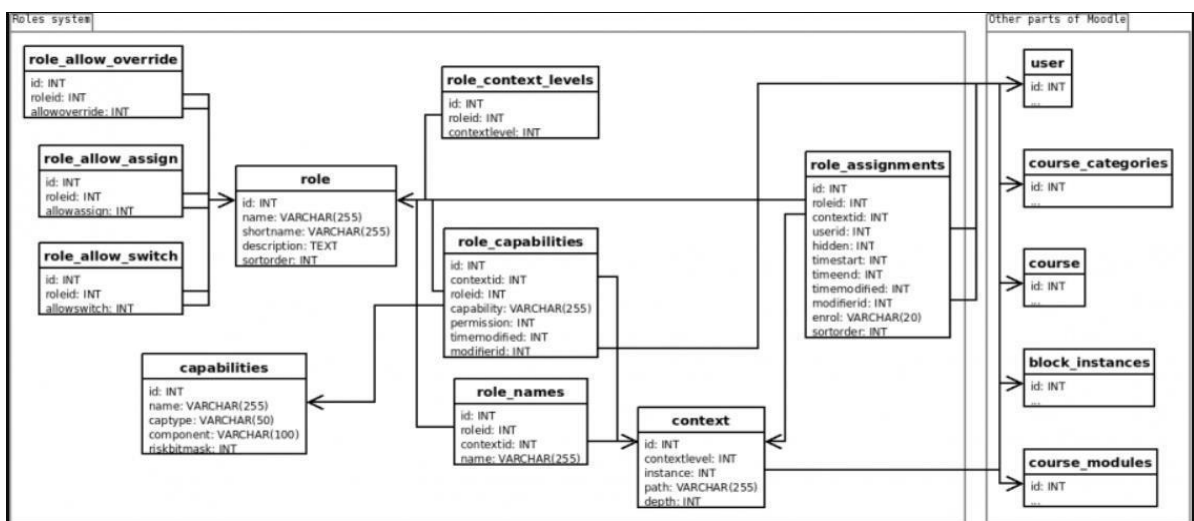

II. Database Design

III. SSO Login Sequence Diagram

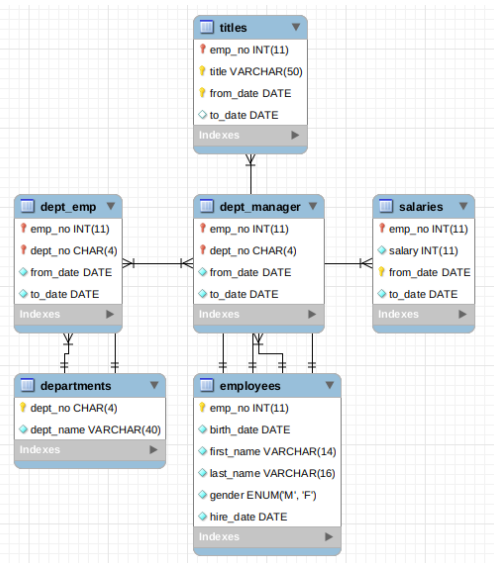

IV. Moodle role synch with our system:

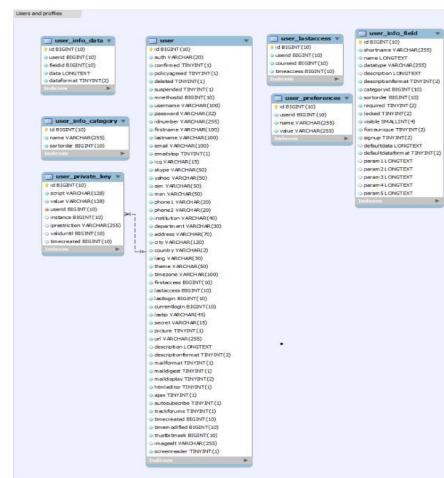

V. SQL Relational Design

a. Enterprise HR Management Portal Employee database

b. Moodle User profile:

4. Organization

4.1 Project group

Name	Initials	Responsibility (roles)
Siva Swaroop Vardhineedi	SV	Project Leader
Mahek Virani	MV	Team Member
Sai Kiran Kammari	SK	Team Member
Sri Charan Reddy	SC	Team Member

4.2 Customer

Our customers include organizations of any size looking to achieve operations efficiency in managing their Human Resources.

The broad set of target customers can be summarized as:

- IT companies
- Small-scale business units
- Manufacturing units

5. Development process

The project is developed in Python. APIs are managed by Flask Framework, role-based access id maintained using SSO open source tool. Learning modules are integrated and managed with Moodle third party framework. Moodle is connected with SSO through open id plugin. Moodle API's are accessed by our python-based client service. Moreover, Moodle authentication and role assignment components code are modified to map our HR/Manager/Employee role with their system specific role and every employee by default gets a 'Student' role inside Moodle learning system. Employees and other related data for employee management and Moodle learning data is stored in MySQL DB. SSO single sign on and role management is stored in PostgresDB.

The overall development process we followed was agile alongside test driven development. We developed various components of the system starting with Single Sign-On. From that point on- ward, we kept track of tasks that everyone was working on, and the features giving them trouble through Google Docs. Additionally, we met on weekly basis to integrate and ensure that we didn't have any major compatibility issues.

6. Deliverables

To	Output	Planned week	Promised week	Late +/-	Delivered week	Notes
----	--------	--------------	---------------	----------	----------------	-------

Customer	Standalone web app integrated with single sign on	09/6/23	9/27/23	0	9/27/23	
Customer	API to fetch department details and Employee details	9/6/23	9/27/23	1	9/29/23	
Customer	Single sign on with Role management	9/27/23	10/4/23	3	10/7/23	
Customer	Create and edit employee API	9/6/23	10/18/23	0	10/18/23	
Customer	Moodle Course creation API	9/6/23	9/27/23	1	9/29/23	
Customer	Moodle role management for HR and Employee roles	9/27/23	10/4/23	1	10/5/23	
Customer	Terminate Employee safe deletion	9/6/23	10/11/23	1	10/12/23	

Customer	SSO role management integration with employee management module	11/1/23	11/15/23	2	11/17/23	
Customer	SSO role management integrated with moodle module	11/1/23	11/22/23	7	11/29/23	
Customer	Writing unit Test cases	11/1/23	11/15/23	0	11/15/23	
Customer	Application testing	11/29/23	12/1/23	0	12/1/23	

7. Project risks

Possibility	Risk	Preventive action
SSO opensource integration with Flask app	High	Team members will communicate periodically and following tutorials about SSO API
SSO opensource integration in moodle	High	Team members will communicate periodically and posted queries in Stackoverflow to understand prior developer experience
Moodle open source is developed with PHP, team members lack PHP programming skills	High	Team members will spend time on learning basic PHP syntax and we have identified a few python wrappers for this integration

Periodic code check and integration is needed	Medium	Team involved in continuous collaboration and each developer maintained separate branches in github to avoid conflict
Cloud deployment	Medium	AWS EC2 instance is not free and we continued to use for quick integration

8. Accomplishments

In this project, we accomplished creating a base HR Management platform which can be extended with many other modules that build on top of the basic infrastructure that we laid down. A few top level accomplishments are:

- SSO authentication via HTTPS
 - Setting up of self-signed certificates as trusted on clients using various certificate management back ends (java, python, bash, etc.)
- Integrating open source learning module- Moodle with our system
- Modifying Moodle source code to fully authenticate via SSO and to synch moodle's system role with our application's role [HR/Manager/Employee]
 - User roles are fetched from SSO as well, with all changes reflected.
- Implementing CRUD based on a 300k+ record database.
 - Managing CRUD permissions via role hierarchy

9. Communication

9.1 Collaboration

Team members are in continuous collaboration in Slack for any project development queries. Meetings are conducted periodically in libraries and the virtual meetings via Google Hangouts.

9.2 Git

All source code with proper comments will be available in Github Repository URL:

<https://github.com/shiva-varadhineedi/272-hrm>

The repository has multiple branches, each representing an application for us. We chose to use different branches for different projects in order to have one location for testing and integration. The various branches are:

- Master: This branch contains the main employee management app named Enterprise HR Management Portal
- Baseapp: This is a landing page app which performs functionality similar to <https://one.sjsu.edu/>. It is fully functional, but due to the time constraints, it was not recorded as part of the video.
- SSO: This branch holds the SSO webserver and the BlueHats organization

configuration. It's ready to run once java 8 is installed on a machine.

- Moodle_aws: This is our fork of the Moodle open learning management application. We worked on this branch to modify the source code to make it compatible with our workflow.

10. Project plan

10.1 Time schedule

Id	Milestone Description	Responsible Dept./Initials	Finished week				Metr.	Rem.
			Plan	Forecast		Actual		
				Week	+/-			

	Identify SSO client	SK	9/8	9/8	-1	9/6		
	Identify third party tools that facilitate training to employees	SC	9/8	9/8	+2	9/10		
	Setup backend database	MV	9/15	9/15	0	9/15		
	Setup github repository	MV	9/15	9/15	0	9/15		
	Setup development environment by each team member	SV	9/8	9/8	+3	9/11		
	Create login page .html. css files	SV	9/13	9/13	-1	9/12		
	Integrate SSO for one user with username: admin, password: test	SK	9/29	9/29	+1	9/30		

	Setup initial flask framework with one GET API working	SV	9/29	9/29	+2	10/01		
	Download and verify moodle in localhost	SC	9/15	9/15	0	9/15		
	Create and verify roles and groups in SSO	MV	10/13	10/13	-1	10/12		
	Implement create and edit employee API	SV	10/6	10/6	+2	10/8		
	Implement terminate API	SK	10/13	10/13	0	10/13		
	Integrate SSO role mapping with API	MV	10/6	10/6	+2	10/8		

	to create a user in moodle							
	Implement moodle api to create course	SC	10/13	10/13	-1	10/12		
	Implement moodle api for role authorization	SC	10/20	10/20	+1	10/20		
	Integrate moodle role with SSO role management	MS/ SC	10/27	10/27	+3	10/30		
	Edit employee API to update Department	SK	10/27	10/27	+3	10/30		
	Integrate SSO with employee management app	SK	11/10	11/10	+1	11/11		

	Update all employee API with Role management	SC	11/17	11/17	+1	11/18		
	Create test cases for API	SK	11/24	11/24	+2	11/26		
	Implement SSO API to create user account and role for new employee	SV	11/17	11/17	0	11/17		
	Deploy testcases with Jenkins	MV	12/01	12/01	+2	12/03		

10.2 Test plan

Test No.	001	Phase:	1	Author:	SV	Date: 11/29
Test Category:	Unit Testcase					
Software Product:	Flask-unittest					

Test Title:	Test Home Page
Test Purpose:	Verify whether User can access the application
Test Setup:	CreateTestApp in setUp()
Prerequisites:	Source code should be present in the same folder path
Procedure:	Execute test cases from command line
Checks:	The unit case creates a app instance and verifies home page
Expected Results:	PASS
Result:	<u>PASS</u>
Reason for Failure:	
Remarks:	

Test No.	002	Phase:	1	Author:	SK	Date: 11/29
Test Category:	Unit testcase					
Software Product:	Flask -unittest					
Test Title:	Verify view departments					

Test Purpose:	Verify whether HR able to view departments
Test Setup:	Create TestApp and connect to test db in setUp()
Prerequisites:	Source code should be present in the same folder path
Procedure:	Execute testcase from command line
Checks:	The testcase verifies list department api
Expected Results:	PASS
Result:	<u>PASS</u>
Reason for Failure:	
Remarks:	

Test No.	002	Phase:	1	Author:	SC	Date: 11/29
Test Category:	Unit testcase					
Software Product:	Flask -unittest					
Test Title:	Verify view departments					
Test Purpose:	Verify whether HR able to view departments					
Test Setup:	Create TestApp and connect to test db in setUp()					
Prerequisites:	Source code should be present in the same folder path					
Procedure:	Execute testcase from command line					
Checks:	The testcase verifies list department api					
Expected Results:	PASS					
Result:	<u>PASS</u>					
Reason for Failure:						
Remarks:						

Test No.	003	Phase:	1	Author:	MV	Date: 11/29
Test Category:	Unit testcase					
Software Product:	Flask- unittest					
Test Title:	Verify 404 status code					
Test Purpose:	Verify whether the application communicates failure code to user					

Test Setup:	Create TestApp and connect to test db in setUp()
Prerequisites:	Source code should be present in the same folder path
Procedure:	Testcase verifies whether all incorrect navigation to correct home page
Checks:	
Expected Results:	PASS
Result:	<u>PASS</u>
Reason for Failure:	
Remarks:	

Test No.	003	Phase:	1	Author:	SC	Date: 11/29
Test Category:	Unit testcase					
Software Product:	Flask- unittest					
Test Title:	Verify 404 status code					
Test Purpose:	Verify whether the application communicates failure code to user					
Test Setup:	Create TestApp and connect to test db in setUp()					
Prerequisites:	Source code should be present in the same folder path					
Procedure:	Testcase verifies whether all incorrect navigation to correct home page					
Checks:						
Expected Results:	PASS					
Result:	<u>PASS</u>					
Reason for Failure:						
Remarks:						

Test No.	004	Phase:	1	Author:	SV	Date: 11/29
Test Category:	Unit testcase					
Software Product:	Flask unittest					
Test Title:	Verify 403 status code					
Test Purpose:	Verify whether users with inappropriate role renders to 403 status code					
Test Setup:	Create TestApp and connect to test db in setUp()					
Prerequisites:	Source code should be present in the same folder path
